

Executive Performance & Operations Report

Q2 2026 • Prepared for Operations & Product Stakeholders

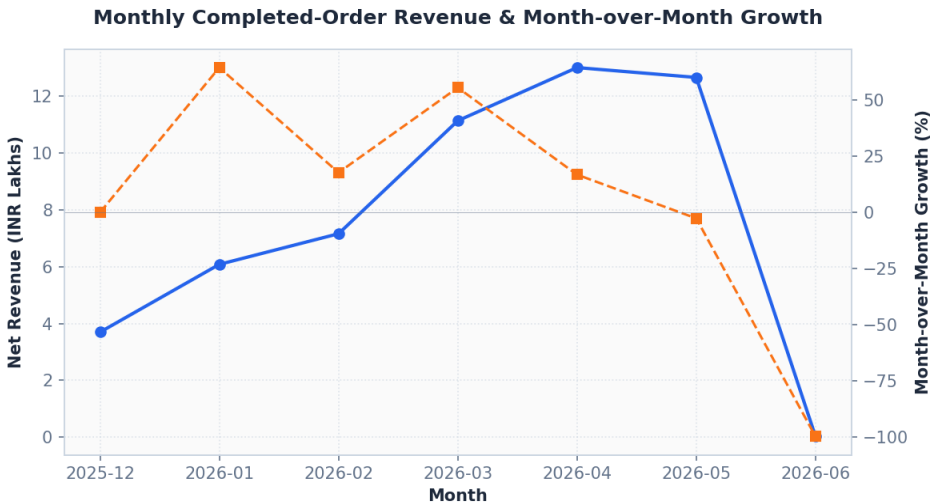

1. Executive Summary

This performance audit report compiles data-driven findings across retail sales cohorts, operations support SLA bottlenecks, product checkout funnel A/B tests, and database profiling. The goal is to translate raw transactional data and system logs into structured KPIs and operational recommendations.

2. Customer Cohort & RFM Profiles

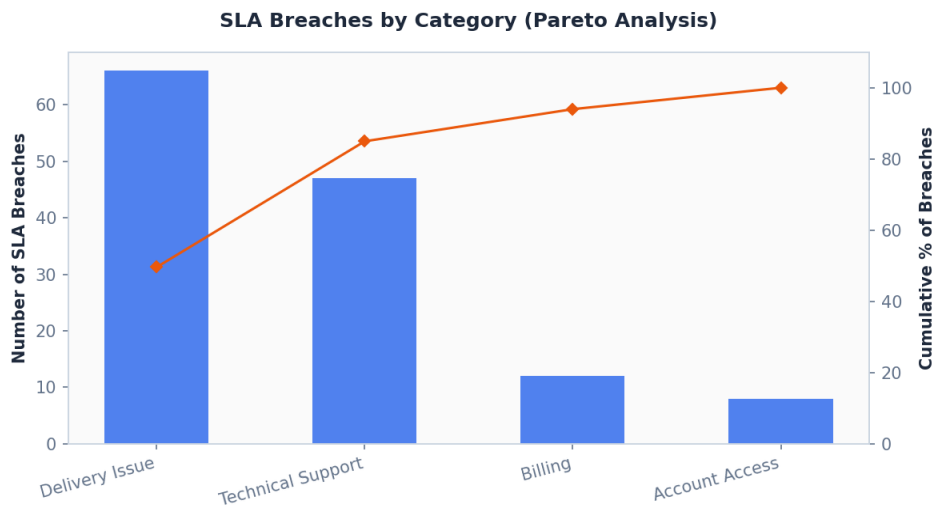

Analysis of our customer base (N=500) shows overall positive sales growth, with completed order revenue reaching INR 53.72 Lakhs. However, cohort retention profiles reveal a sharp drop in Month 1 customer returns (dropping to ~35-45% active), signifying onboarding friction.

Metric Label	Value	Business Impact
Completed Sales	INR 53.72 Lakhs	Total completed transaction volume
Active Repeat Rate	63.0%	249 active customers are repeat buyers
Order Return Rate	4.5%	Minimal revenue leak, but needs monitoring

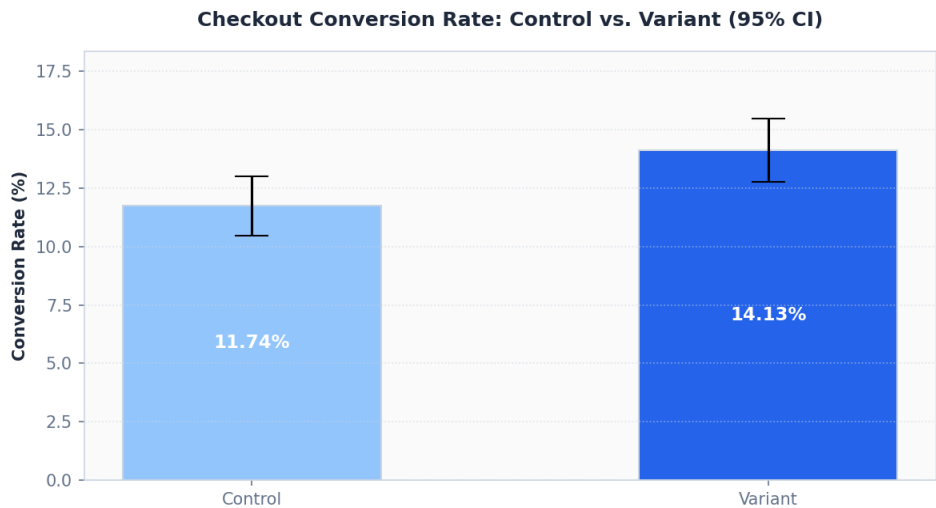

3. Operations Queue SLA & CSAT Audit

Auditing support ticket queues (N=1,000) revealed an overall SLA compliance of 80.67% (below the target of 90%). Pareto analysis isolated 'Delivery Issue' requests as the primary bottleneck, representing 40.7% of all breaches. SLA misses directly hurt customer satisfaction (CSAT), driving scores from a healthy 3.98/5.0 down to a critical 1.44/5.0.

4. Checkout Funnel A/B Experiment

To optimize checkout conversions, we evaluated a simplified 1-page checkout variant (N=2,505) against the control flow (N=2,495). The variant achieved a conversion rate of 14.13% (vs. 11.74% control), indicating a +2.39% absolute lift. Hypothesis testing proved statistical significance ($Z = 2.52$, $p = 0.01188 < 0.05$), warranting a 100% rollout.

5. Stakeholder Recommendations

* **Redesign 'Delivery Issue' Workflows:** Restructure standard operating procedures for delivery queues to lower handling times (AHT) below the 72-hour target.

* **Implement Escalation Warnings:** Program real-time alerts in Zendesk/Salesforce when high-priority tickets reach 50% and 75% of their SLA windows.

* **Roll out New Checkout Flow:** Approve the variant checkout release across 100% of e-commerce traffic, keeping mobile performance as a guardrail.

* **Apply Staging Gate Schema Rules:** Enforce NOT NULL constraints on critical customer fields and unique primary keys on transactions to eliminate duplicate logs.
